

Welcome

Sea Ice Prediction Network—Phase 2 (SIPN2) Webinar Series

“Advancing Predictability of Sea Ice”

Presented by:
Uma Bhatt, University of Alaska Fairbanks
Cecilia Bitz, University of Washington

10 July 2018

#SIPN2

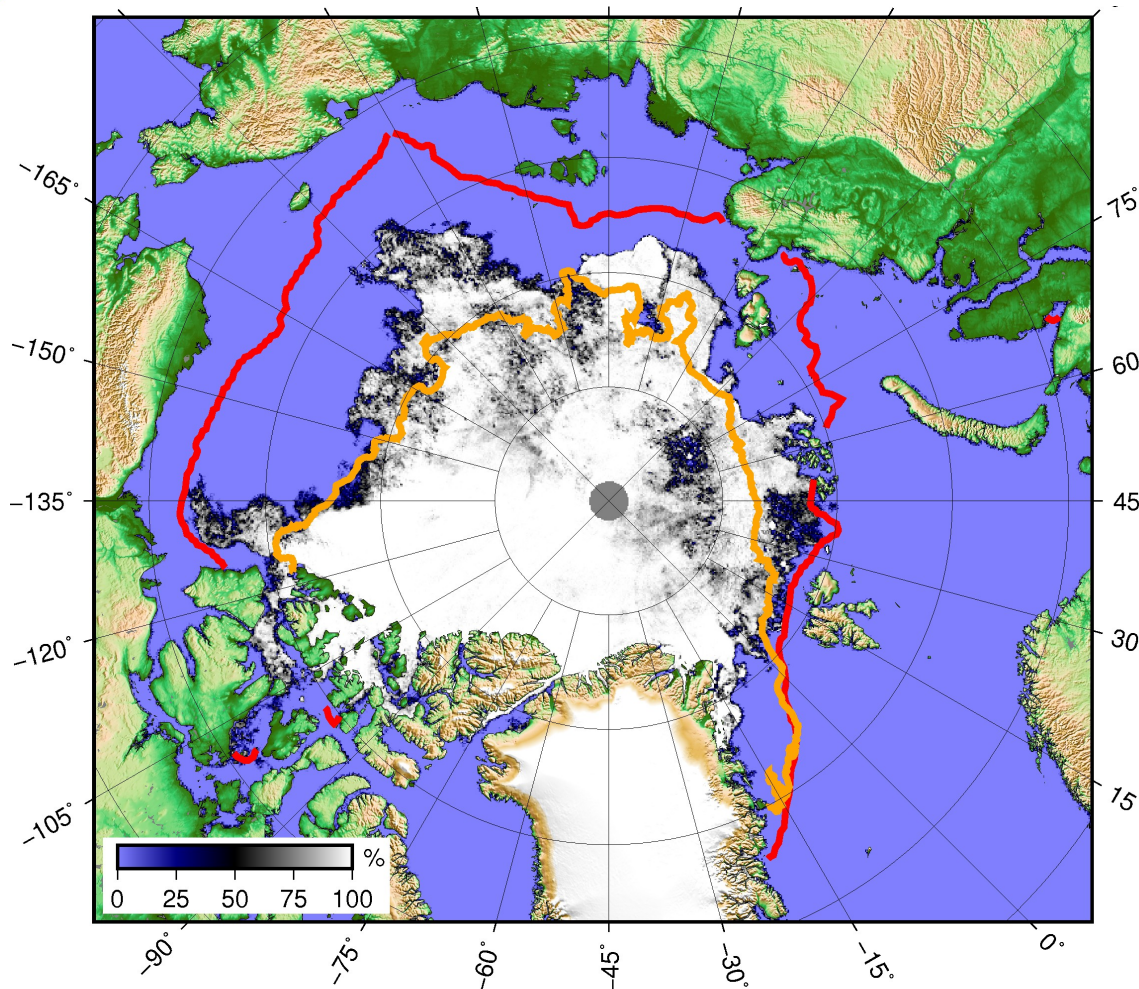

Participant Questions

- Questions will be addressed at the end of the presentation.
- Type your question in the chat window at any time throughout the presentation.
- A facilitator will ask your question for you during the presentation Q&A.

Advancing Predictability of Sea Ice

U. Bhatt (overview) & C. Bitz (prediction portal)
SIPN2 Webinar, Tuesday July 11, 2018

2017 Minimum
Spren et al. 2008

— 1981–2010 September — 2012 September

Upward trend of Sea ice minimum during the past 3 years

Sea ice retreat slower than expected in 2018

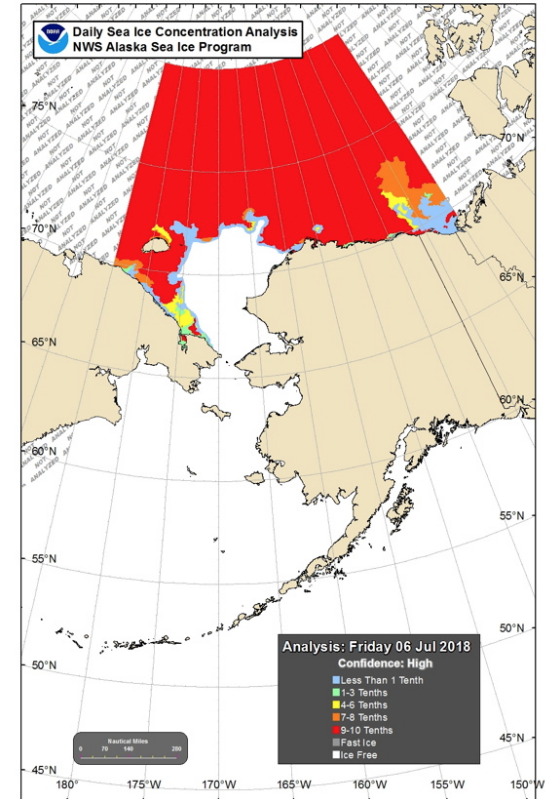

Chukchi-Beaufort sea ice below long-term median but above recent median

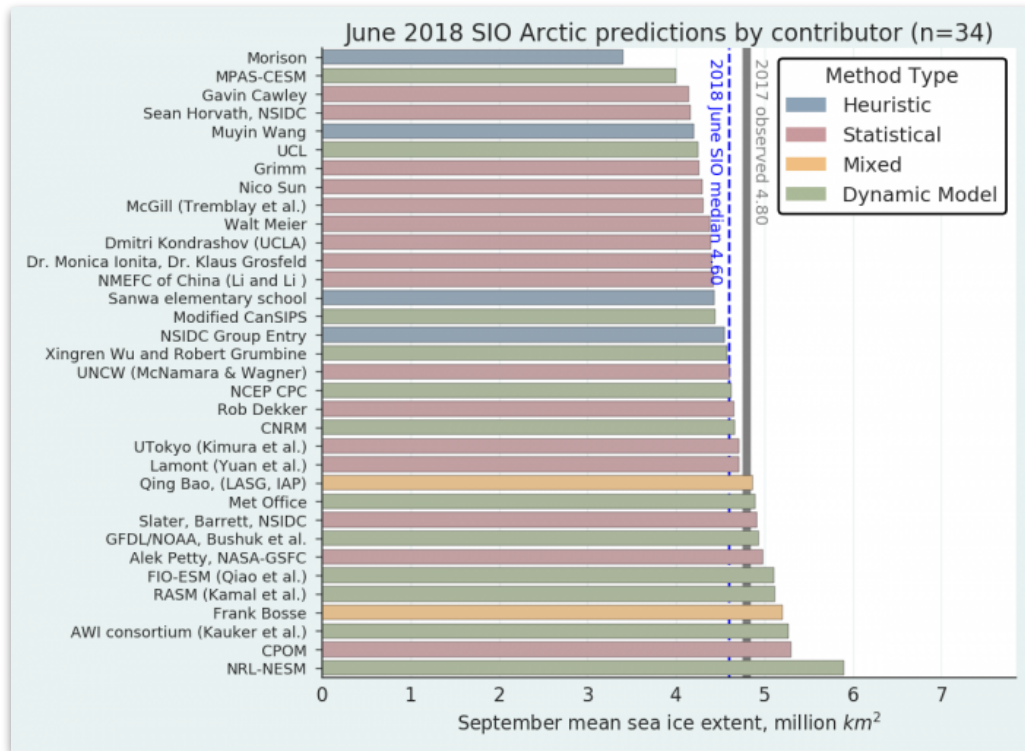

Chukchi & Beaufort Seas Combined Daily Ice Extent
1979-2018

Data source: NSIDC Sea Ice Index, Version 3
Updated through July 06, 2018

Sea Ice Outlook (SIO) Pan-Arctic and Alaska Regional

Antarctic Sea Ice: SIPN South

How do ocean heat anomalies impact seasonal sea ice predictability?

Atlantic Layer Heat reaching the surface layer

Polyakov et al. 2017

Pacific Heat Inflow into the Arctic

Woodgate 2018

What types of information about sea ice is needed by the Alaska marine shipping & can we provide it?

- **How does Alaskan marine shipping incorporate sea ice prediction in planning and operations?**
 - *Relationship between length of season, timing, volume and frequency of shipping.*
 - *Long-range planning*
- **What are the obstacles/limitations of sea ice prediction?**
 - *Reliability and accuracy of prediction within short and medium terms*
 - *Variability of forecast (especially long term) and relationship to risk and investment.*
- **What dimensions of sea ice prediction most contribute to safety of operations and firm profitability?**
 - *Influence of predicted ice location, density, and flow on route planning (fuel costs, labor expenses)*
 - *Inter-seasonal predictions and investment in new shipping or ship overhauls (long run capital investment)*

SIPN2 team

Uma Bhatt, PI SIPN2, University of Alaska Fairbanks (UAF)

Peter Bieniek, Alaska climate

Hajo Eicken, Sea ice

Joseph Little, Economist

John Walsh, Climate

Jürgen Kurts, Complex systems, [UAF Chapman Chair](#)

**Helen Wiggins (co-PI) &
Betsy Turner-Bogren,
ARCUS**

**Larry Hamilton, University
of New Hampshire,
Human dimensions of
climate**

SIPN2 team

Muyin Wang, co-PI, University of Washington
Ed Blanchard-Wrigglesworth, Climate & sea ice
Mike Steele, Arctic oceanography
Cecilia Bitz, ONR-PI, Sea ice prediction,
Prediction Portal for SIPN Forecasts

Mark Serreze, co-PI, U.
Colorado, Arctic Climate

Julienne Stroeve, NERC-PI,
University College London,
Sea ice & remote sensing

Extended SIPN2 team, in-kind support

Walt Meier, NSIDC
U Colorado, Sea
ice, **NASA**

Elizabeth Hunke, Los
Alamos National
Laboratory, sea ice
modeling, **Dept. of Energy**

François Massonnet,
University of Louvain,
Antarctic Sea Ice
Network **Belgium**

James Overland,
Pacific Marine
Environmental
Laboratory,
Arctic climate,
NOAA

Thomas Jung, Alfred
Wegener Institute, **EU**
APPLICATE project, YOPP

Funded by the Horizon 2020
Framework Programme of the
European Union

Why collaborate?

- Diverse views make us all think more deeply and question our interpretations.
- More eyes/brains/perspectives makes for deeper understanding, needed for complex problems
- Prediction portal facilitates collaboration

A new Sea Ice Prediction Portal: year-round S2S sea ice forecasting

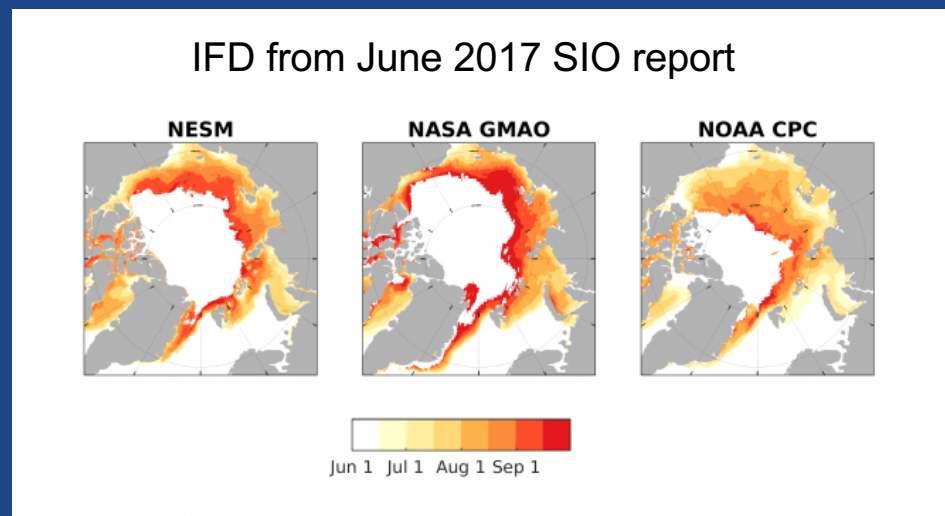

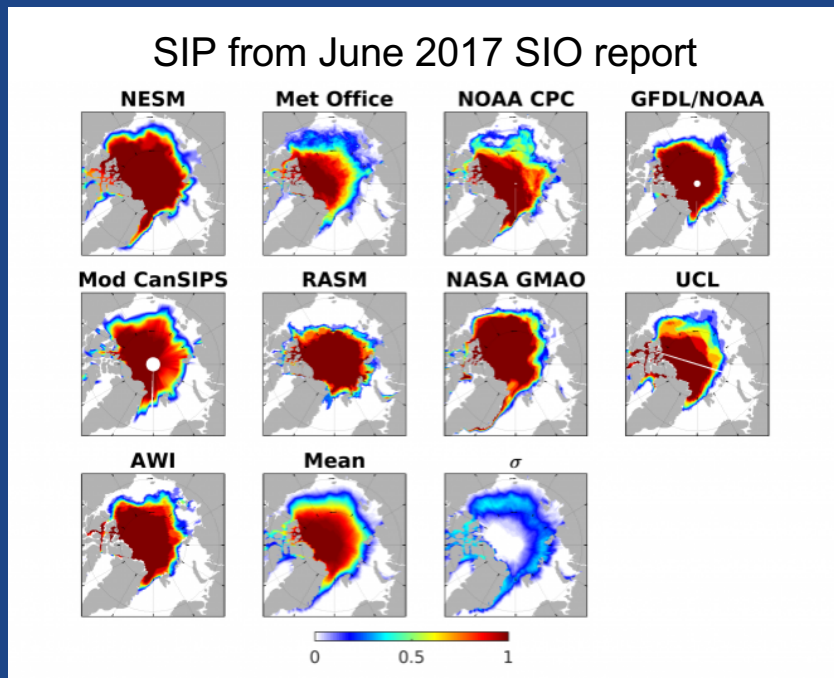

Cecilia Bitz, Nicholas Wayand and Edward Blanchard-Wrigglesworth
Atmospheric Sciences, University of Washington, USA

The 2014-2017 Sea Ice Outlook

- Focused on September minimum
- 1-3 month lead times
- Participants computed full-field metrics: **Sea Ice Probability (SIP)** and **first Ice-Free Day (IFD)**

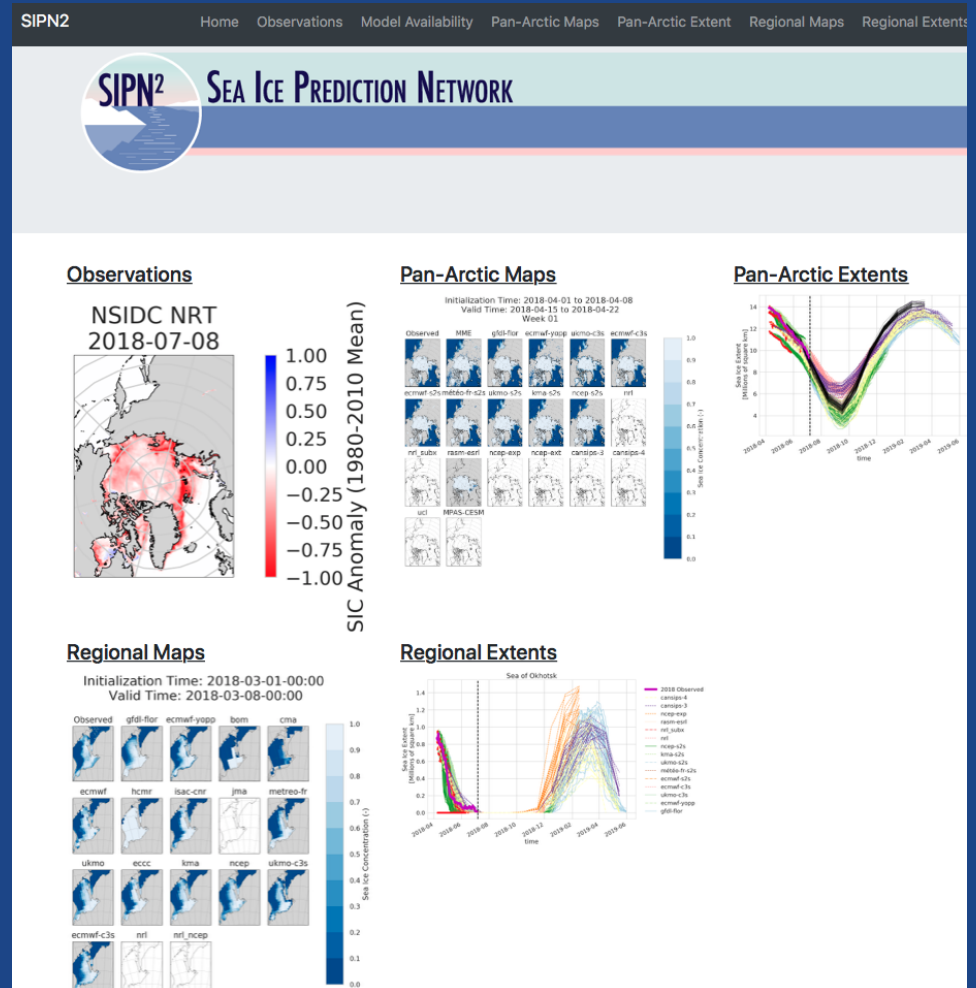

Figures by Ed Blanchard-Wrigglesworth

New SIPN Prediction Portal

atmos.uw.edu/sipn

Goals:

- Analyzing year-round forecast evaluations: **Sea-ice Concentration, Thickness, Ice Free Day, Ice Edge** etc.
- 1 week - 1 year lead times
- Easier for participants to submit data (native formats, raw output)
- Portal automatically regrids, post processes, and computes metrics

Henceforth, all figures by Nic Wayand

How it works, each day

Forecasts
uploaded

Rsync, gathered
from S2S & C3S
at ECMWF, etc.

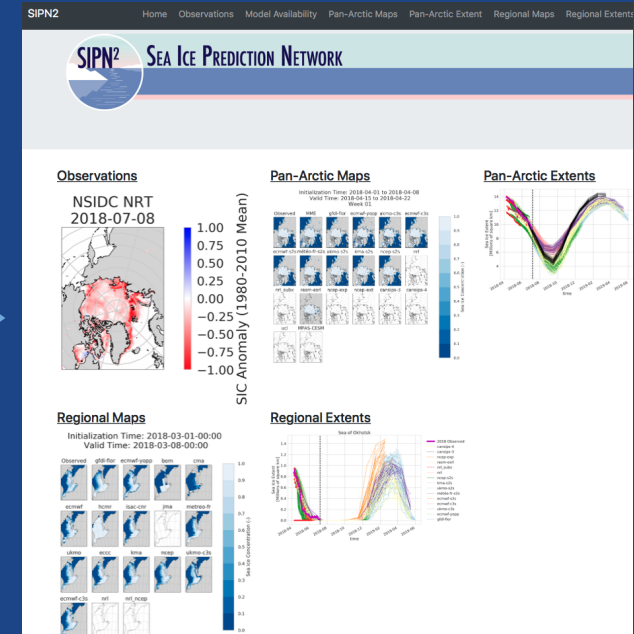

Observations
uploaded

Gathered from
NSIDC, etc.

Post Process
& Analysis

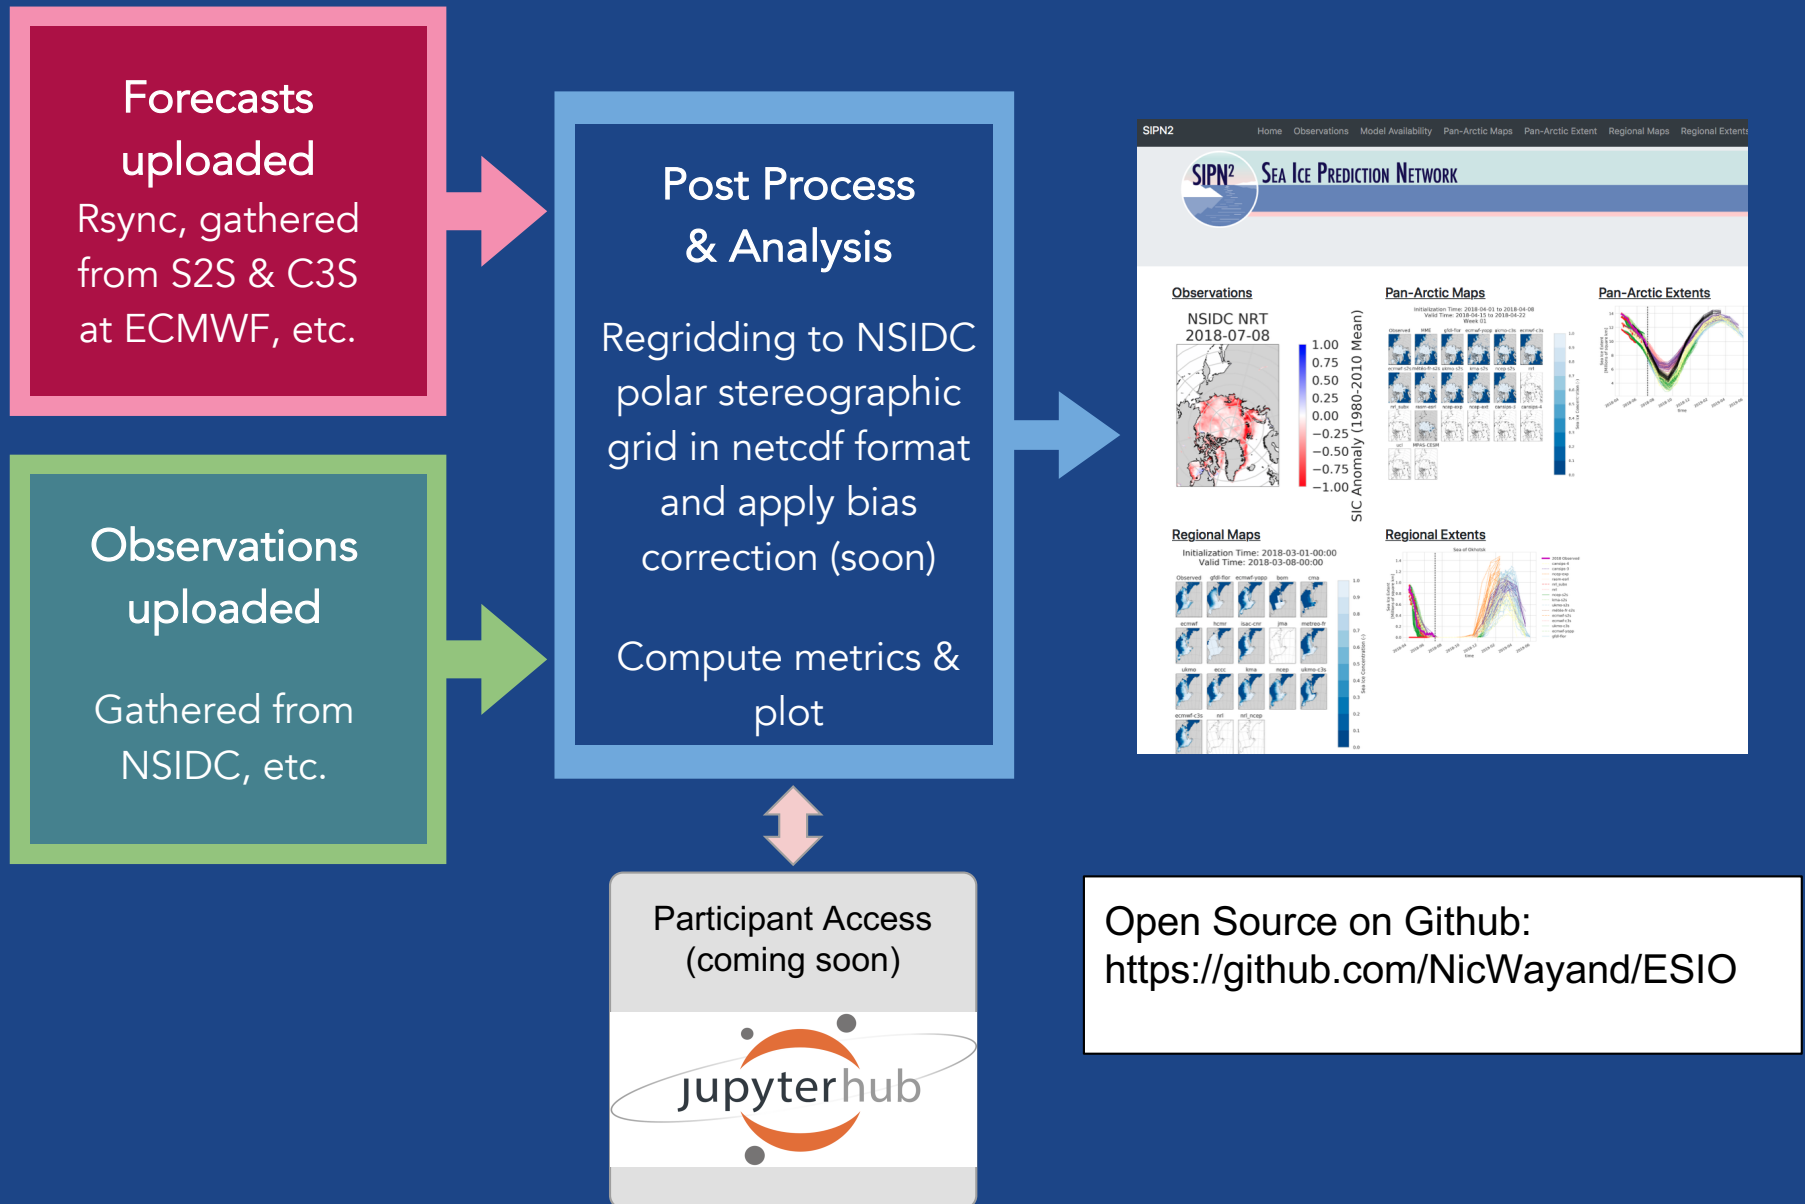

Regridding to NSIDC
polar stereographic
grid in netcdf format
and apply bias
correction (soon)

Compute metrics &
plot

Open Source on Github:
<https://github.com/NicWayand/ESIO>

How it works, each day

Variable to Plot:

Sea ice concentration

Metric:

Ensemble Mean
 Sea Ice Probability
 Anomaly

Initial time :

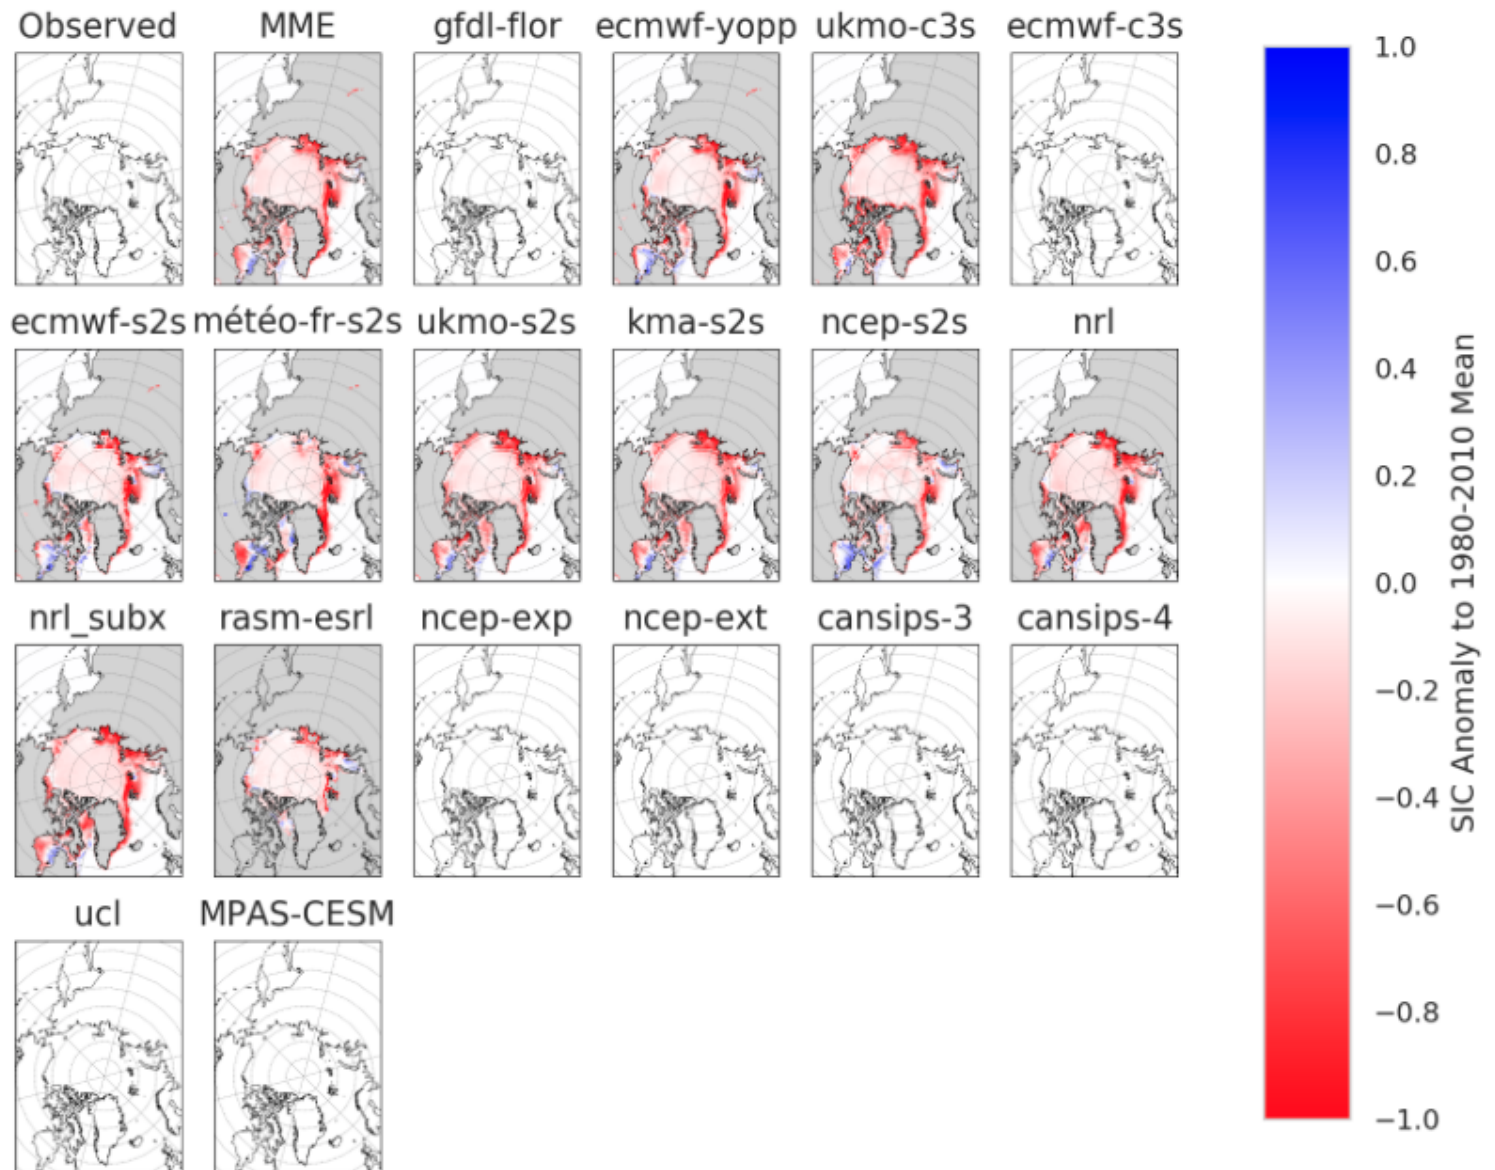

2018-06-17

Lead time:

Pan-Arctic and Regional Extent

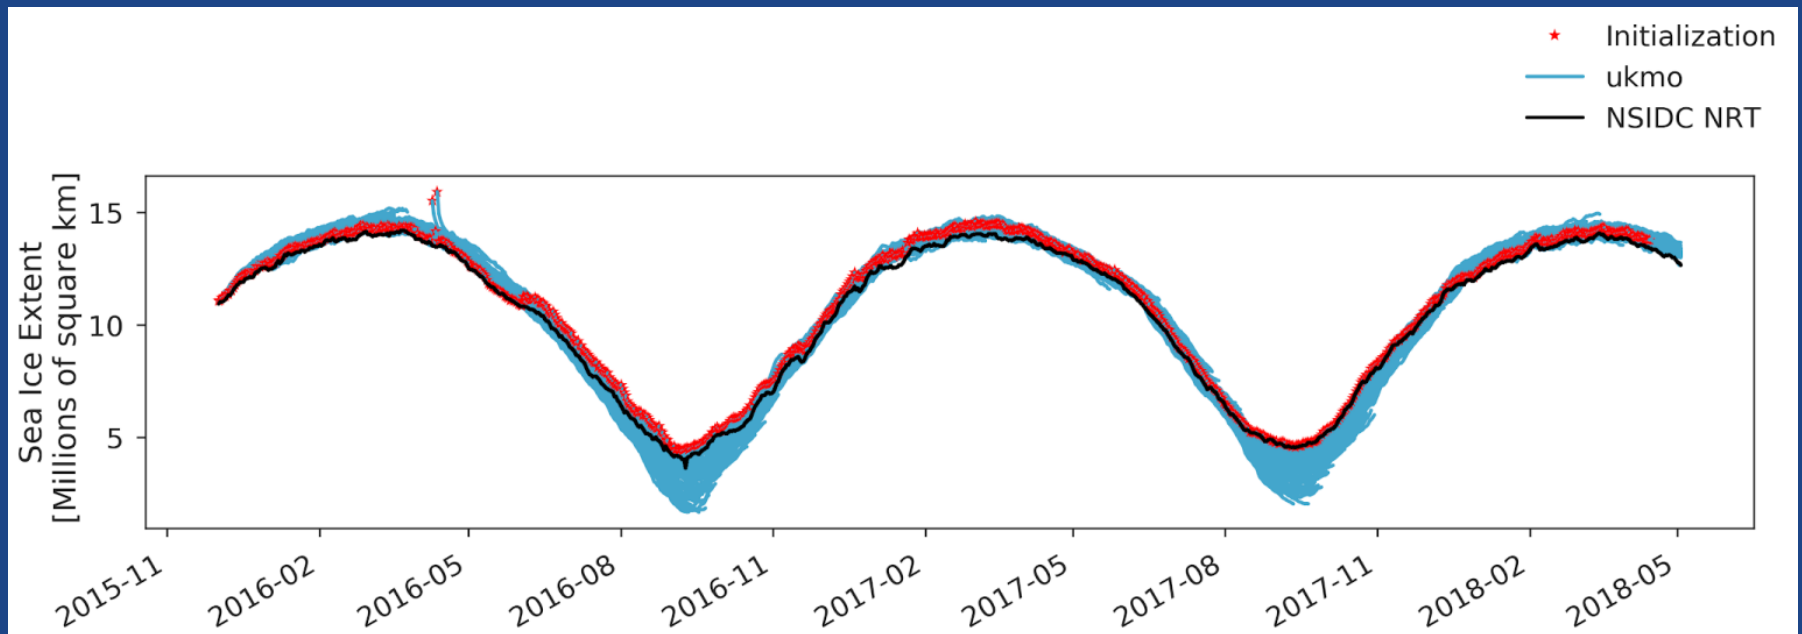

Coming soon: Participant access via Jupyter Notebook connection through your browser

Study example: UKMO S2S

Pan-Arctic Extent (where grids overlap)

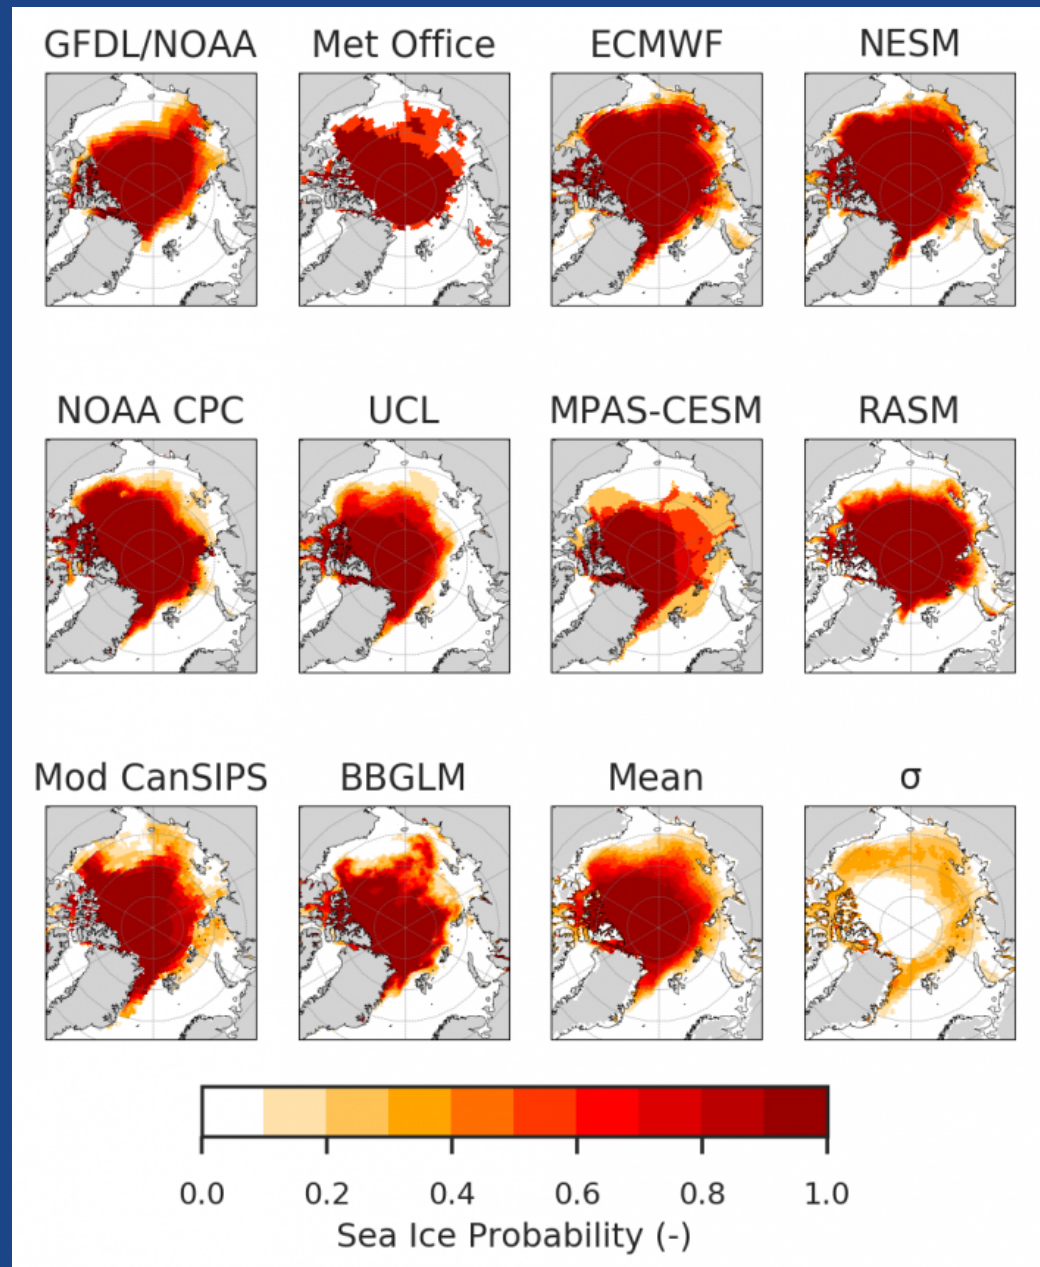

Study example: All models

RMSE versus initialization date (for all lead times)

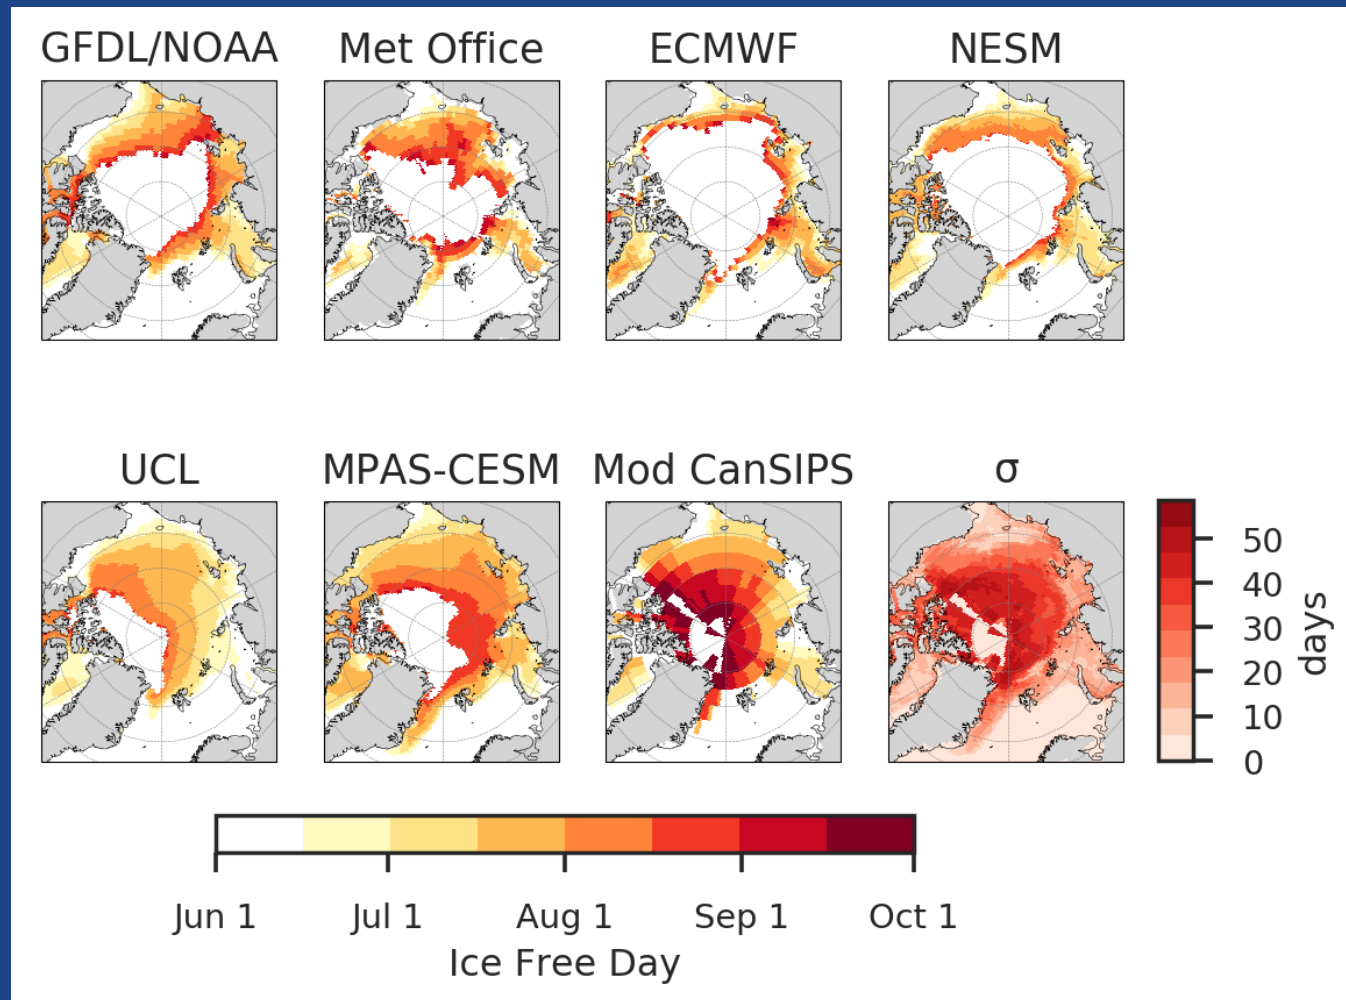

2018 Sea Ice Outlook

- We'll compute SIP & IFD for you (or you can send us yours)
- Soon we'll apply bias correction methods to all contributions so raw output is our preference
- Low ice cover in the Barents and Bering are associated with low SIP in the Alaskan region

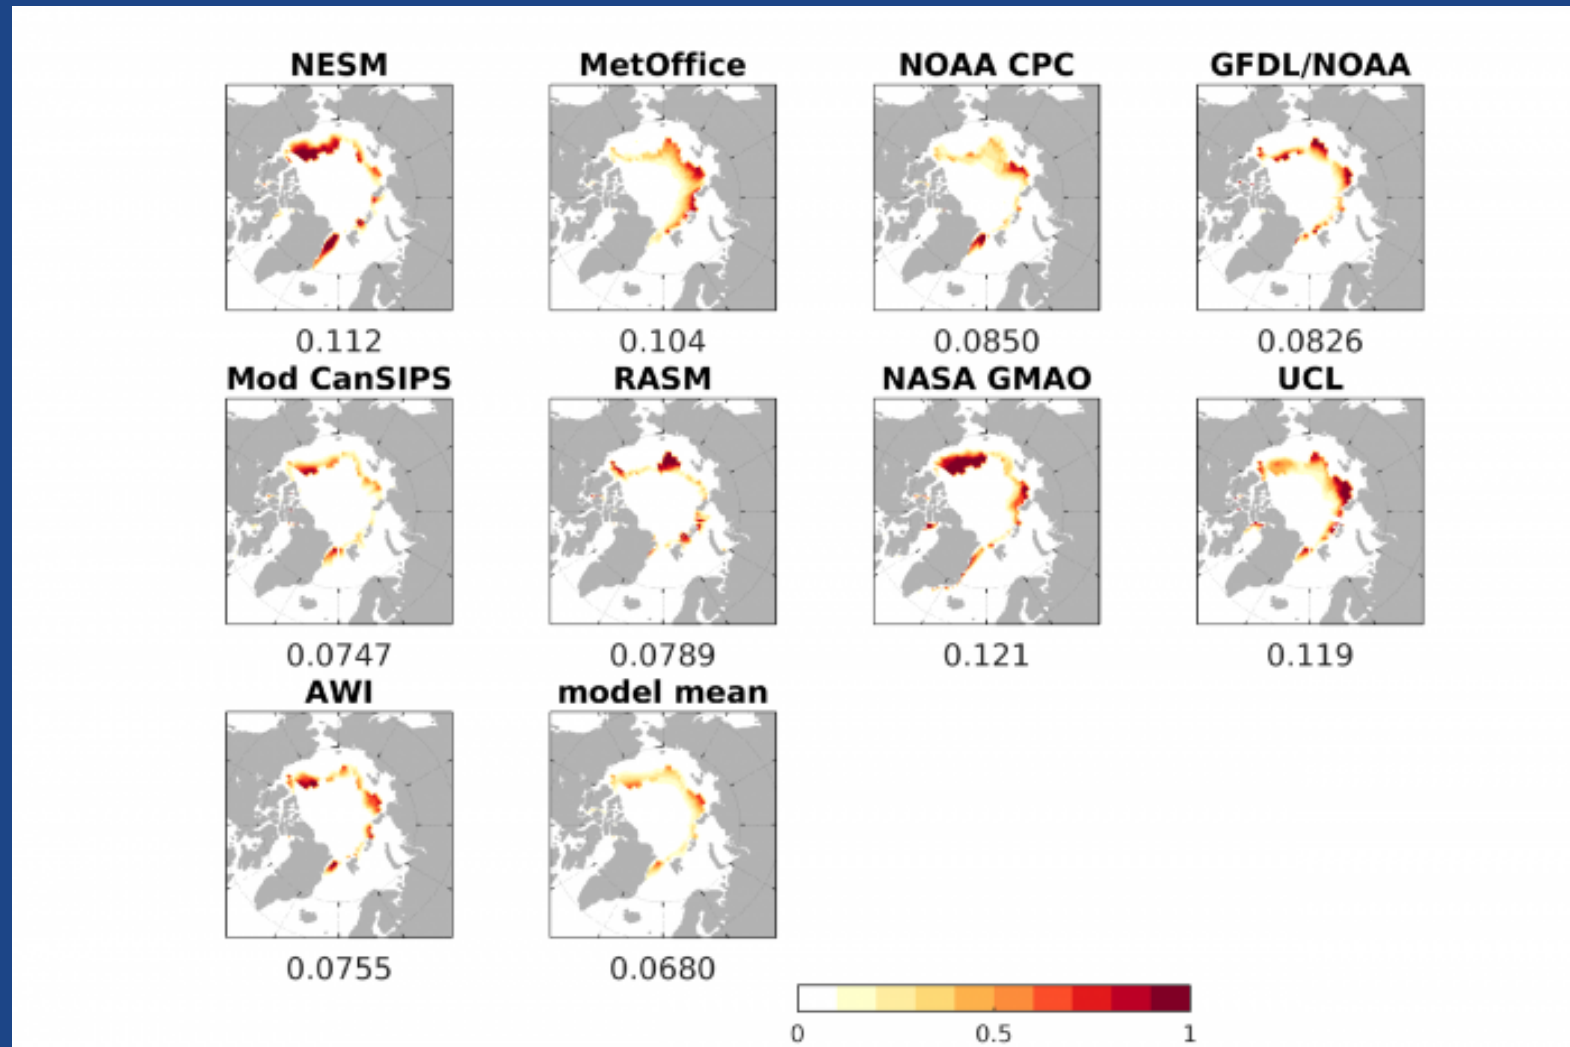

2018 Sea Ice Outlook

- Low ice cover in the Barents and Bering are associated with early first ice-free dates this year

Post Season Sea Ice Outlook

- We'll evaluate these forecasts, like we did last year

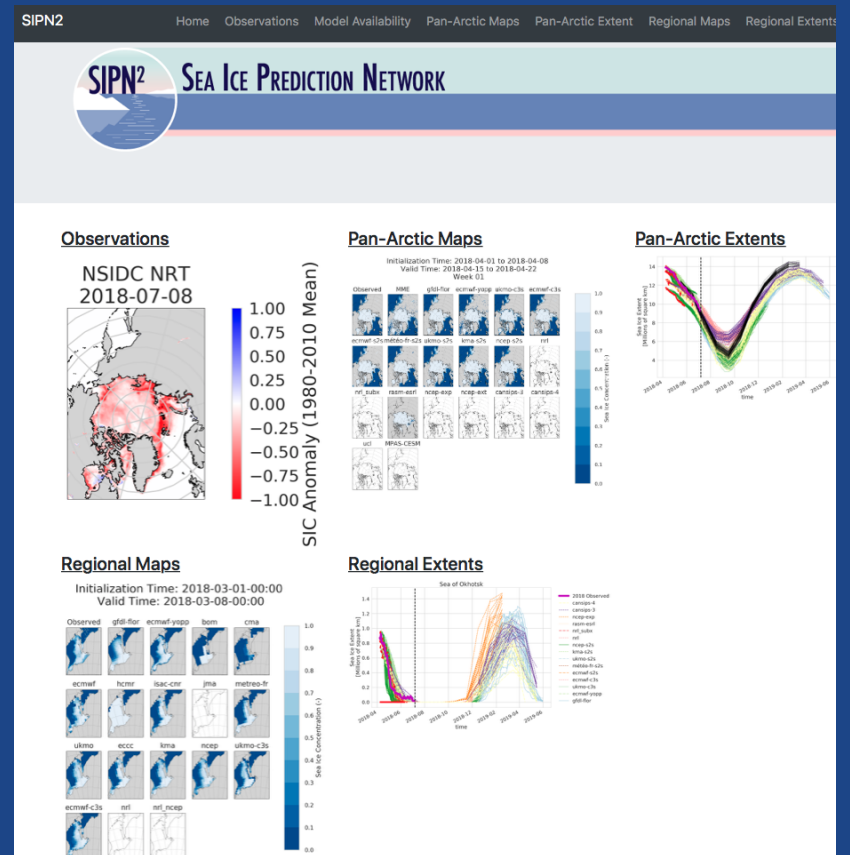

Summary

- Beta SIPN Prediction Portal is available (started in February)
- Stay tuned for expanded post processing, more variables, new model metrics, and access using Jupyter Notebooks
- Contact us to include your forecasts or give feedback
