

Sea Ice Outlook
2020 August Report
Individual Outlook

Name of contributor or name of contributing organization:

Cawley, Gavin

Is this contribution from a person or group not affiliated with a research organization?

Name and organization for all contributors. Indicate primary contact and total number of people who may have contributed to your Outlook, even if not included on the author list.

Gavin Cawley, School of Computing Sciences, University of East Anglia

**Do you want your June contribution to automatically be included in subsequent reports?
(If yes, you may still update your contribution via the submission form.)**

Include this submission in both the July and August reports.

What is the type of your Outlook projection?

Statistical

Starting in 2017 we are accepting both pan-Arctic and pan-Antarctic sea ice extent (either one or both) of the September monthly mean. As in 2016, we are also collecting Alaskan regional sea ice extent. To be consistent with the validating sea ice extent index from NSIDC, if possible, please first compute the average sea ice concentration for the month and then compute the extent as the sum of cell areas > 15%.

a) Pan-Arctic September extent prediction in million square kilometers.

4.0791

b) same as in (a) but for pan-Antarctic. If your method differs substantially from that for the Arctic, please enter it as a separate submission.

c) same as in (b) but for the Alaskan region. Please also tell us maximum possible extent if every ocean cell in your region were ice covered.

"Executive summary" of your Outlook contribution (using 300 words or less) describe how and why your contribution was formulated. To the extent possible, use non-technical language.

September mean pan-Arctic SIE is predicted to be 4.59 million square kilometers (mskm) with

Brief explanation of Outlook method (using 300 words or less).

one month at a time. The pan Arctic sea ice extent forecast is calculated by summarizing all cell

Tell us the dataset used for your initial Sea Ice Concentration (SIC).

Only uses previous monthly September sea ice extent data.

Tell us the dataset used for your initial Sea Ice Thickness (SIT) used. Include name and date.

If you use a dynamic model, please specify the name of the model as a whole and each component including version numbers and how the component is initialized:

[DynamicModelType]

If available from your method.

a) Uncertainty/probability estimates:

Median

4.0791

Ranges

2.9757 - 5.1825

Standard Deviations

b) Brief explanation/assessment of basis for the uncertainty estimate (1-2 sentences).

Bayesian posterior predictive uncertainty from Gaussian Process

c) Brief description of any post processing you have done (1-2 sentences).
