

PUBLIC OUTLOOK

Charles Wilson

Despite 26% less Ice VOLUME than 2007, 79 days of Cloud buried my Extent number, offsetting 3 Record Monthly Melts & the Dipole's return (after 42 days). Yet my forecast's Words hit the mark: there WASN'T much left save the Ice shelves - - they broke off & spread around - for the first time in 3000+ years! But: my whole point was the El Nino Effect - - I SHOULD have realized: Ninos' heat: makes MORE Clouds ! For future Forecasts: Cloud duration = ONI times 33 days (44 for Modokis like 2010).
